

# Pervasive Status 35 Error

Taken from the Pervasive help documentation:

*"35: The application encountered a directory error "Either a Get Directory operation specified a drive that does not exist, or a Set Directory operation specified an invalid pathname. Check the validity of both the drive and the pathname."*

Typically this occurs when something happens between the client computer and the server computer that causes the mapped drive/directory to be lost.

Confirm that the directory exists and that the Pervasive server is operating correctly.
