

Closing a Terminal Batch for NOVA using NETePay

To close a batch using NOVA (Terminal), you must use the datacap NETePay Administrator. See the following instructions for downloading the TERMINAL version of datacap NETePay. [Installing datacap netepay](#).

Merchants should normally select HOST based, automatic close when they are setting up their merchant information with their processor.

This also applies to TSYS Vital Visanet, Global, Heartland, RBS-Lynk and any other terminal based batch processing.
